**Re: Bat Warmers**

**Attention: This is now approved by Softball Canada**

These products keep composite bats warm so the bats do not crack when in colder temperatures. The bat warmer does not alter the characteristics of a composite bat and now is approved by Softball Canada. One of the brand names is PyroFlite Microwavable Bat Warmer.

ASA has done tests and the warmer does not change physical structure to the bat... The warmer helps the composite bat maintain a temperature that gives the bat its optimum performance level. Below is a picture of the Pyro Flite Microwavable Bat warmer.
